MOUNTING PERFINS

My method is somewhat different than the others, first I arrange alphabetically, then divide each letter into four groups according to Metz's plan, then pencil prick the design on small looseleaf pages. Then I ink the dots and to the right put the name and address of user, also business if known.

Next I mount the stamps face down on black loose leaf pages, stamps on the left and identification at the right. I mount only one type on a page.—Hallock Card
